

Advantages of Dense Forest

- It provides oxygen, clean the air, reduce ambient temperature & also help to save water.
- Moreover during monsoons, dense urban forests prevent rain water from evaporating. Thus, it serves as a natural method of rainwater conservation & improves the water table.
- 30 times better noise and dust reduction
- Up to 30 times better carbon-dioxide absorption as compared to a monoculture plantation.
- Up to 30 times more dense compared to conventional plantations.
- At least 50-100 different native species planted in the same area.
- Guaranteed growth of at least 1 meter every year.
- A completely maintenance-free, wild and native forest after the first three years.
- A completely chemical and chemical fertiliser free forest that sustains itself and
- It supports bio-diversity. as they become home to various bird species, small animals and microorganisms.

gives you 30 times more oxygen

Dense Forest

gives you 30 times more oxygen
By Miyawaki Method

Minimum area
Required 1000 sq ft

DENSE FOREST

Sakla Landscaping

is pioneer in making dense forest by **miyawaki** method in maharashrtra.

Till today we have made 7 forests.

Compared to conventional plantation, these forests grow

10 times faster in this **Miyawaki** method.

The Miyawaki Technique is a unique methodology proven to work worldwide, irrespective of soil and climatic conditions. More than 3,000 forests have been successfully created worldwide using this methodology.
