Rose Pussta

Uniqueness & Specialty of Rose Pussta

- Pussta is unique variety to get 100 to 150 flowers at a time on single plant.
- Flower remains on plant for 23 to 24 days whereas other varieties remain for only 6 to 10 days
- Very bright velvet red & no other rose variety has such bright color
- This variety is best to use in landscaping as garden will be always full of flower beds through out year
- Pussta rose variety is best to grow in pots
- Pussta variety of rose is very dwarf variety as compared with other variety
- This variety is less susceptible for pest & diseases as compared with other variety of roses
- It requires minimum fertilizer & application of insecticides & other sprays
- We have collection of 1500 varieties of roses but this variety has maximum sale in our nursery
- From last 35 years we are in the production of the this rose variety.
- Honeybees get attracted to this variety due to bright red color & dark yellow circle

Sakla Landscaping is pioneer in making dense forest by Miyawaki Method in Maharashtra.

Compared to conventional plantation, these forests grow 10 times faster in this Miyawaki method.

More than 3,000 forests have been successfully created worldwide using this methodology.

Advantages of Dense Forest

1. It provides oxygen, clean the air, reduce ambient temperature & also help to save water.
2. Moreover During monsoons, dense urban forests prevent rain water from evaporating. Thus, it serves as a natural method of rainwater conservation & improves the water table.
3. 30 times better noise and dust reduction
4. Up to 30 times better Carbon-dioxide absorption as compared to a monoculture plantation.
5. Up to 30 times more dense compared to conventional plantations.
6. At least 50-100 different native species planted in the same area.
7. Guaranteed growth of at least 1 meter every year.
8. A completely maintenance-free, wild and native forest after the first three years.
9. A completely chemical and chemical fertiliser free forest that sustains itself and
10. It supports bio-diversity. as they become home to various bird species, small animals and microorganisms.
